SolidMill[®] + HyperHard[®]

Solidmill[®] is the new technology to produce pavers moulds for the most demanding Customers in terms of quality and precision of their products.

Solidmill[®] allow us to produce the insert of the mould by milling machine, directly from solid sheets of special steel, suitable to be HyperHard[®], our innovative surface hardening heat treatment.

The high dimensional tolerances obtained with our Solidmill[®] technology grant a production of paver blocks all uniform among them.

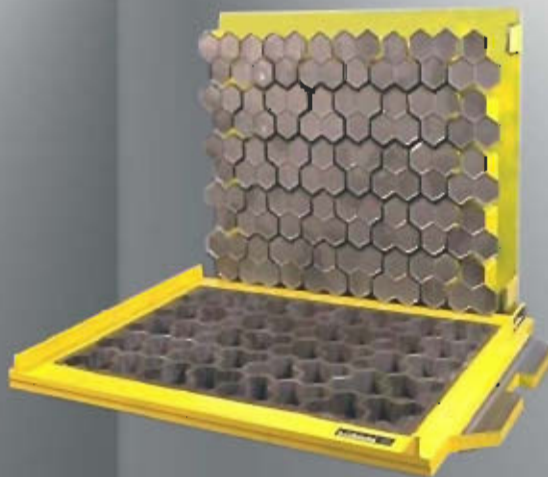

The accurate smooth finish surfaces and the perfect verticality of the inside walls, make extremely easy the un-moulded, granting a longer life of the mould.

*Our innovative surface hardening heat treatment **HyperHard** gives a strong hardness on inner surfaces of the insert without alteration of the peculiar elasticity and resistance of the basic material. The sum of **SolidMill** + **HyperHard** is a mould of very high quality and life.*

***SolidMill** + **HyperHard** makes a mould of remarkable quality and resistance to the abrasion, granting a high quality and precision in paver blocks production.*
